

Circle of Life

June 2019

TOPIC OUTLINE

In Science the children will be learning about the function of the different parts of a plant; they will investigate what is necessary for good plant growth and how water is transported in a plant.

Children will be focusing on working scientifically by making careful observations, gathering and recording data, reporting on findings and using evidence to answer questions and support their findings.

In Maths the children will be consolidating their learning, using the four operations to solve problems.

#PROUD OF OUR
SCHOOL

CHALLENGE

Visit a garden centre and see what plants you can identify.
